

Only OOPS based Pizza Bill Generator me tum mainly object modelling aur class interaction practice karoge.

Isme ye cheezein ho sakti hain:

Main Classes

1. Pizza

Represent karega ek pizza.

Fields:

- size (small/medium/large)
- base price
- extra cheese
- extra toppings
- take away

Methods:

- addExtraCheese()
- addExtraToppings()
- takeAway()
- calculateBill()
- printBill()

2. DeluxePizza

Pizza ko extend karega.

Concept:

- inheritance
- method overriding

Isme:

- already cheese/toppings included ho sakte hain
- alag pricing logic ho sakta hai

3. Bill / Invoice

(Optional)

Responsibility:

- final bill format
 - itemized print
-

OOPS Concepts Jo Use Honge

Encapsulation

Fields private rakh sakte ho:

price

toppings

Constructor

Pizza create hote time:

size choose

base price set

Inheritance

Pizza

DeluxePizza

Polymorphism

Pizza p = new DeluxePizza();

Method Overriding

Deluxe pizza ka billing alag ho sakta hai.

Features Jo Add Kar Sakte Ho

Pizza Size

- Small
- Medium
- Large

Different prices.

Add-ons

- extra cheese
 - extra toppings
 - cold drink
 - garlic bread
-

Bill Generation

Output:

Base Pizza : 200

Extra Cheese : 50

Toppings : 70

Total : 320

Veg / Non-Veg

Boolean ya subclasses.

Actual Goal

Ye project:

- UI/project beauty ke liye nahi
- OOPS thinking ke liye hota hai.

Tum seekhoge:

- object responsibility
- data hiding
- class interaction
- inheritance kab use karna
- reusable methods
- state maintain karna

Ye beginner backend thinking ka starting point hota hai actually.
